

Table 1. Changes in psychotropic medication and correlations with PTSD symptom severity

	3MDR (n=22)		NTCC (n=21)		Correlation to CAPS-5 change T0-T3	
	n	%	n	%	r	p
Discontinuation of psychotropic medication	1 ^a	4.5	0	0	.23	.17
Increased dosage of psychotropic medication	1 ^b	4.5	2 ^c	9.5	.05	.76
Start psychotropic medication treatment	1 ^d	4.5	1 ^e	4.8	.24	.14
Any type of change in psychotropic medication	3	13.6	3	14.3	.29	.08

Note. Point-biserial correlation coefficient (r) and corresponding p-value. No significant correlations. ^a Discontinuation of benzodiazepine and SSRI. ^b SSRI increased dosage. ^c Increase dosage of antipsychotic (one patient) and benzodiazepine (one patient). ^d Started SSRI. ^e Started benzodiazepine.
