

Supplementary Figure 3

Supplementary Fig 3. Dectin-1/-2 do not participate in the splenic response to *A. fumigatus*. Mice were infected intravenously with 1×10^6 *A. fumigatus* conidia and analysis was performed in spleen macerates 5 days post-infection. **a**, fungal burden; **b**, levels of IL-15 and IFN- β ($N = 9-16$ animals/group, data pooled from two to three independent experiments, One-way ANOVA and Fisher's LSD test. **c**, Pearson correlation between fungal burden in kidney or spleen and splenic levels of IL-15.
