

Movie 1. Sonographic four chamber view of the fetal heart at gestational weeks 20. A small and severely hypertrophied right ventricle, interatrial septum bulging to the left atrium.

Movie 2. Sonographic view of the fetal heart at gestational weeks 20. Aorta rising from the left ventricle and a small pulmonary artery from the small and severely hypertrophied right ventricle crossing the aorta.

Movie 3. Angiography of aortic root (lateral view) with no connection from the aorta to the coronaries.

Movie 4. Angiography of right ventricle (lateral view) with both the right and the left coronaries completely perfused by the ventriculo-coronary arterial communications from the right ventricle. Coronaries display numerous stenotic regions. Additional catheter in ascending aorta.
