

Supplementary  
Figure S1,  
Foster et al

## **Supplementary Legends**

### **Supplementary Figure S1. DNA copy number changes detected by array CGH in each cell line.**

Each spot represents an individual BAC. Spots above the upper threshold represent copy number gain, while spots below the lower threshold represent copy number loss.

### **Supplementary Figure S2. Relation between numbers of non-clonal and clonal rearrangements in cervical SCC cells.**

Differences between the cervical SCC cell lines in the number of non-clonal rearrangements were generally maintained when numbers of clonal rearrangements were included. The numbers of rearrangements shown here are controlled for modal chromosome number. Further details are as for Figure 4D.
