

Supplementary Figure 2

Supplementary Figure 2. Silencing of SOCS3 following HCMV infection inhibits viral replication.

HMVEC were transfected with siSOCS1, siSOCS3 or siCNTR 1 hour p.i.. Western blot analysis shows the expression pattern of IE, E and L viral antigens in the three conditions (siSOCS1, siSOCS3 and siCNTR) at 3 days (A) and 5 days (B) p.i.. In (C) is shown the titration of the supernatant collected 5 days p.i. in siSOCS1, siSOCS3 and siCNTR infected cultures. Shown are mean values and SD of two independent experiments, with * $p < 0.05$.
