

**Supplemental Table 1:** Intradialytic Activity Level and Interest in Participating in Intradialytic Cognitive Tasks (n=424) and Physical Exercise (n=421) Among Adults Undergoing Hemodialysis

	Interest in Intradialytic	
	Brain Games (n=424)	Exercise (n=421)
Participants Interested	67.9%	76.0%
Odds Ratio (95% CI) of Interest		
Activity Index	1.30 (1.08, 1.57)	1.24 (1.03, 1.52)
Younger age (<65 years)	3.15 (1.94, 5.13)	1.04 (0.61, 1.80)
Female sex	0.80 (0.51, 1.25)	0.76 (0.47, 1.23)
Black race	1.26 (0.82, 1.65)	1.42 (0.90, 2.26)
Frail	0.93 (0.52, 1.65)	0.89 (0.48, 1.63)

Note: Higher intradialytic activity levels as measured by this index reflects more activity during the dialysis session. Smaller study samples in this analysis reflect survey item nonresponse.
